Ampere**Soft**

simply faster engineering

AmpereSoft ToolDataManager

The cross-project search and maintenance tool (local/network) for your work with AmpereSoft ProPlan.

- **Search fast and easy the required** Ampere**Soft** Pro**Plan** project in selectable directory structure (local/network) under using of **project attributes (text markers), standard texts, open texts, symbol names and material attributes.**

- **Maintain** attributes, symbols and materials, project-specific or cross-project.

- Take advantage of the **effective mass management** for i.a. a material and symbol import, archiving and compressing as well as the output of the selcted ProPlan projects.

- Use the **straightforward drag & drop function** for opening or creating a new ProPlan project. If needed, use for the new project simply an existing project as a master.

The available versions:

Tool**Data**Manager Light**:** User-defined project overview as well as searching functions and filter functions for text markers and standard texts in the reading mode. Is designed for users who want to get an overview of projects / applications and their properties, e.g. sales department and top level management.
This version is included for AmpereSoft ProPlan user from version 2016.1.

Tool**Data**Manager Professional**:** Additional editing functions for text markers and project data. Including searching functions for open texts, symbols and material values as well as scripting function to the automation of process. Cross-project management functions as for example archiving, moving, printing and files output (DXF-, DWG-, PDF file). Project creating with or without master project.

Tool**Data**Manager Professional - Zusatzmodul Excel-Import**:** For the import of project parameters from external Excel management files. Via Scripting this process can be automated

The efficient functions in the overview:

Functions	Features	User benefits
Cross-project search of symbols, material data and open texts	Search in free selectable directory structures (local/network)	Fast finding of the searched project parameters
Quick find table	Search of text markers and standard texts inside the displayed project table	Fast finding of searched projects/master projects
